Non-parsed blocks

To include a non-parsed block into a page, indent it by at least two spaces or use the code or file tags.

Syntax highlighting

DokuWiki supports code highlighting. It uses the GeSHi Generic Syntax Highlighter (<http://qbnz.com/highlighter/>), and recognizes any language supported by GeSHi. The code must be included between tags that identify the programming language, for example: <code oobas></code> or <code java></code>.

Embedding HTML and PHP

If the HTML/PHP embedding is enabled, you can include HTML and PHP code into DokuWiki pages:

```
<html><font color="red" size="+1">Lorem ipsum</font></html>
```

Page export

Single page can be exported to different formats by adding an appropriate do parameter to the URL:

```
http://wiki.splitbrain.org/wikiexport?do=export_raw
```

The following export options are available:

export_raw (returns the pages source as text/plain)

export_xhtml (returns the rendered page as simple XHTML without any navigational elements)

export_xhtmlbody (returns the rendered XHTML of the page only)
